

# Concept Note for Project

**Title:** Finding Missing Persons Using AI

## 1. Introduction

- **Project Background:** Thousands of People, especially Children, go missing every day in India, Traditional Investigation methods such as manual inquiries, posters and CCTV footage reviews are time-consuming.
- **Purpose:** To develop a lightweight, AI-powered application that can help law enforcement, NGOs, and the general public to quickly identify and locate missing persons using facial recognition and crowd-sourced image matching.

## 2. Project Objectives

- **Main Goals:**
  - Use AI (MediaPipe Face Mesh) to match missing person photos with real-world images (e.g., CCTV footage, public submissions).
  - Enable multi-user access (admin, public) through mobile and web interfaces for real-time reporting and tracking.
- **Expected Results:**
  - Reduce time and human effort in identifying missing individuals.
  - Create a platform that is portable, open-source, and scalable for use by NGOs or city-level law enforcement.

## 3. Justification

- **Need for the Project:**
  - Manual matching is inefficient for the volume of missing persons and media data

- Existing systems lack AI integration and are not user-friendly for public reporting.
- **Impact on Community:**
  - Faster and wider reach for missing persons identification.
  - Empowers communities to actively participate in reporting and locating individuals.

#### 4. Methodology

- **Strategic Approach:**
  - Develop the core application using Python, Streamlit, and MediaPipe.
  - Use SQLite for a lightweight, file-based database suitable for quick deployment.
- **Key Actions:**
  - Implement facial recognition and matching algorithm.
  - Design a mobile/web dashboard for both public users and administrators.

#### 5. Budget Plan

Expense Item	Estimated Amount	Source of Funds	Notes
<u>Development Tools</u>	Rs. 5000	Team Contribution	VS Code, Streamlit, testing tools
<u>Hosting/Deployment (optional)</u>	Rs. 2000 / Month	Sponsorship or Grants	Could use free tiers initially

<b><u>Marketing and Awareness</u></b>	<b>Rs. 3000</b>	<b>NGO Partnership</b>	<b>Flyers, awareness campaigns</b>
<b><u>Mobile App Testing Devices</u></b>	<b>Rs. 10000</b>	<b>College, Incubator</b>	<b>For user testing, debugging</b>
<b><u>Miscellaneous (Data, API)</u></b>	<b>Rs. 2000</b>	<b>Team/ External Fund</b>	<b>Image dataset enhancement</b>

## 6. Project Timeline

<b>Activity</b>	<b>Start Date</b>	<b>End Date</b>	<b>Key Milestones</b>
<b>Requirement Analysis</b>	<b>Jul 31</b>	<b>Aug 2</b>	<b>Finalize user roles, Input types</b>
<b>Frontend</b>	<b>Aug 2</b>	<b>Aug 3</b>	<b>Ready Framework</b>
<b>AI model Integration</b>	<b>Aug 3</b>	<b>Aug 4</b>	<b>Face matching model</b>
<b>Web App development</b>	<b>Aug 4</b>	<b>Aug 5</b>	<b>Basic Dashboard, image uploading</b>
<b>App Submission</b>	<b>Aug 4</b>	<b>Aug 5</b>	<b>Submission form handling</b>
<b>Testing and Feedback</b>	<b>Aug 5</b>	<b>Aug 5</b>	<b>Field Testing</b>

<b>Final Report</b>	<b>Aug 6</b>	<b>Aug 6</b>	<b>Presentation, Lean Canvas and Documentation</b>
---------------------	--------------	--------------	------------------------------------------------------------

## 7. Conclusion

- **Summary:** This project leverages facial recognition AI to reduce the time and effort required to locate missing persons. Through a user-friendly web and mobile platform, it allows both authorities and the public to contribute to the cause efficiently.
- **Future Actions:**
  - Integrate cloud-based face recognition API for scale.
  - Collaborate with government agencies and smart city surveillance.
  - Add multilingual support and location-based alerts.
